Course Conclusion

You've Done It!
Congratulations 🎉 🐍

1. **Welcome & Course Overview** ✅

2. **Managing Third-Party Dependencies With pip** ✅

3. **Isolating Dependencies With Virtual Environments** ✅

4. **Finding Quality Python Packages** ✅

5. **Setting Up Reproducible Environments & Application Deploys** ✅

6. Course Conclusion

Lightning Review

You now know how to:

- Manage Python project dependencies with pip

You now know how to:

- Manage Python project dependencies with pip

- Isolate project dependencies with virtual environments to avoid version conflicts

You now know how to:

- Manage Python project dependencies with pip

- Isolate project dependencies with virtual environments to avoid version conflicts

- Find and identify quality third-party packages to use in your own Python projects

You now know how to:

- Manage Python project dependencies with pip

- Isolate project dependencies with virtual environments to avoid version conflicts

- Find and identify quality third-party packages to use in your own Python projects

- Set up repeatable development environments and application deployments
